# EARLY LEARNING PRESCHOOL PROGRAM

Early childhood education programs assist in giving children the special attention they need to be successful in their future. The YMCA is excited to offer Preschool programming that places an emphasis on implementing activities that relate to the early learning standards as they are outlined on the Department of Education website.

A child's brain develops more quickly from birth to five than it ever will again. 90% of brain development occurs before the age of 5. This stage in your child's life is critical in his/her development as he/she will learn a tremendous amount of skills and learn new information that is needed to be a success throughout the rest of his/ her life. The early years in a child's life are the best opportunities for a child's brain to develop the connections they need to be healthy, capable, successful adults. These connections help children begin to understand important life-skills such as motivation, self-regulation, problem solving, and communication skills.
